JOSE CABRAL

Senior Full Stack Python Engineer

Bronx, New York | josecabral.info@gmail.com
goinfinitely.github.io | github.com/GoInfinitely | linkedin.com/in/jc-mtd

PROFILE

Senior engineer building high-throughput backend systems, REST and GraphQL APIs, and event-driven microservices for SaaS, e-commerce, FinTech, and mobility platforms. Deep expertise in Python, asynchronous processing, real-time systems, and distributed architecture. Experienced delivering production services on AWS, Azure, and Google Cloud with Docker, Kubernetes, and Terraform.

PROFESSIONAL EXPERIENCE

Curb Mobility

Senior Full Stack Python Engineer | Oct 2025 - Apr 2026

- Engineered Python booking and dispatch services handling thousands of daily trips, with FastAPI, Django, WebSockets, and Redis.
- Reduced driver-rider matching time by 40% and improved API response time by 45% through PostgreSQL query optimization and caching.
- Built geolocation APIs, asynchronous Celery and RabbitMQ workflows, and Stripe payment and payout integrations.
- Delivered React rider and driver interfaces and deployed booking, dispatch, pricing, and payment microservices on AWS with Kubernetes.

ELEKS

Senior Full Stack Python Engineer | Aug 2024 - Aug 2025

- Built enterprise SaaS microservices and REST/GraphQL APIs using FastAPI, Django, Flask, React, Kafka, and Celery.
- Shortened release lead time by 55% using GitLab CI, Docker, and Terraform across AWS and Google Cloud.
- Accelerated terabyte-scale ETL pipelines by 60% through Pandas tuning and asynchronous workflows.
- Raised test coverage to 90% with PyTest suites integrated into CI/CD; deployed APIs to Cloud Run and Azure App Services.

Peiko

Senior Backend & MLOps Engineer | Feb 2022 - Mar 2024

- Migrated a monolith to Django REST Framework and gRPC microservices, increasing release frequency by 45%.
- Improved reliability by 40% with Docker and Kubernetes, and streamlined data ingestion by 30% using caching and asynchronous streaming.
- Delivered FinTech backend services, Stripe billing, and event-driven pipelines with RabbitMQ and Google Cloud Pub/Sub; provisioned multi-cloud infrastructure with Terraform.

JOSE CABRAL

Experience & technical foundations

Amazon

Lead Backend Developer | Oct 2018 - Oct 2021

- Architected Django and Flask APIs serving millions of requests per day for e-commerce applications.
- Led a cross-functional team of eight developers modernizing legacy Python services into Flask microservices.
- Cut p95 latency by 45% using Redis caching and Nginx rate limiting; implemented OAuth and JWT authentication.
- Built Airflow ETL pipelines, Celery order-processing and inventory queues, React dashboards, and zero-downtime deployment pipelines.

Vention

Python Developer | May 2017 - Aug 2018

- Built full stack applications and real-time telemetry APIs with Django, Flask, and React.
- Improved deployment speed by 50% through service decomposition and database performance by 40% through SQL and NoSQL query tuning.
- Delivered cloud infrastructure on Azure and Google Cloud, automated reporting with BigQuery, and coached junior developers on Flask and Django.

TECHNICAL SKILLS

Backend & APIs - Python, FastAPI, Django, Django REST Framework, Flask, REST, GraphQL, gRPC, WebSockets, OAuth, JWT, asynchronous processing

Data & messaging - SQL, PostgreSQL, Redis, Kafka, Celery, RabbitMQ, Pandas, NumPy, Dask, Airflow, BigQuery, ETL pipelines

Cloud & delivery - AWS, Azure, Google Cloud, Docker, Kubernetes, Terraform, GitLab CI, Jenkins, Nginx, PyTest, TDD, SonarQube

Frontend - React, JavaScript, Redux, Plotly Dash, responsive interfaces

ML tooling - MLflow, Kubeflow, DVC, Azure Machine Learning, experiment tracking, CI/CD for ML

EDUCATION

Master of Arts, Web Development & Web Design
Touro College | 2020 - 2022

Bachelor of Science, Computer Science
DeVry College of New York | 2014 - 2017
